TEMPORARY BARRIER

A VERSATILE MULTI PURPOSE BARRIER

The water-filled nature of the ArmorZone™ barrier simplifies its deployment and transportation while increasing safety during the installation process as the empty barriers only weigh 50kg and are easily handled by two operators.

The ArmorZone™ has been crash tested at 70km/h as a longitudinal barrier with terminal ends and accepted by NZTA as a “temporary system”. Upon impact with a wide range of vehicles, ArmorZone™ safely re-directed them from impact at angles of up to 25° and speeds up to 80km/h (EN1317, TB31, N1). Safe and predictable trajectories were observed during the tests.

ArmorZone™ deployment involves interlocking the 2.16m long units with a unique connecting pin and filling each barrier with 520l of water. ArmorZone™ can be deployed straight or with low curvature, on either roadside or median applications, in speed zones up to 70 km/h. The ArmorZone™ barrier has many advantages in the market place including high durability, high performance, fast (and safe installation) at a very competitive cost.

A high performance barrier to provide work-zone protection to temporary construction sites and other roadside activities.
